## DETAILED ACTION

### *Double Patenting*

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 2, 7-8, 16-20 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-9 of U.S. Patent No. 6,278,781 in view of claims 1-2 of U.S. 6,947,571.

Regarding independent claims 2, 7, and 17, patent "781" discloses a wireless device including a mic, a modulator, an encoder for encoding steganographically, and an RF amplifier for transmitting the RF signal, (claim 1), and the device further includes a receiver having a decoder for steganographically decoding (claims 6, 9), a processor for decoding steganographically (claim 7), a display (claim 8). However, patent "781" fails to teach an optical sensor for producing images.

The US patent no. "571" discloses a portable device having a sensor to capture image and a decoder for watermarkedly (steganographically) decoding the image

Art Unit: 2685

(claims 1-2). Therefore, it would have been obvious to one skilled in the art at the time the invention was made to employ a decoder for steganographically decoding images in a wireless device in order to improve audio or image signals.

Regarding dependent claims 8, 16, 18-20, these limitations have been disclosed in claims 1-9 of patent "781".
